PIR SENSOR IN PROTEUS USING ARDUINO

AIM:

To write an Embedded C program for interfacing PIR Sensor using Arduino Uno and Proteus

SOFTWARE REQUIRED:

- Proteus 8 software.
- Arduino IDE software

CIRCUIT DIAGRAM:

PROGRAM:

```
int Status = 13; // Digital pin D6
```

```
int sensor = 12; // Digital pin D7
```

```
void setup() {
```

```
  Serial.begin(9600);
```

```

pinMode(sensor, INPUT); // declare sensor as input

pinMode(Status, OUTPUT); // declare LED as output

}

void loop() {

long state = digitalRead(sensor);

Serial.println(state);

if(state == HIGH) {

digitalWrite (Status, HIGH);

Serial.println("Motion detected!");

delay(1000);

}

else {

digitalWrite (Status, LOW);

Serial.println("Motion absent!");

delay(1000);

}

}

```

OUTPUT:

RESULT:

Thus the program has been successfully verified and executed.
